AMI 310 instruments can also calculate and display the **WBGT index** that corresponds to a index of composite temperature used to estimate the effect of temperature, humidity and solar radiation on humans. It is calculated from the following temperatures :

- T<sub>w</sub> = Wet-bulb temperature or natural wet temperature, measurement calculated from the relative humidity of a thermo-hygro probe ;
- T<sub>g</sub> = Globe temperature, measured with a globe thermometer, or black globe thermometer, whose sensitive element is in black glass or black-smoke coated in order to run approximatively as a black body to measure the solar radiation. The measurement is realised with a temperature probe placed in a black ball ;
- T<sub>a</sub> = Air temperature (measured by a thermometer whose bulb is protected from the solar radiation by a screen). The temperature measurement is realised with a thermo-hygro probe ;

AMI 310 instruments have the following functions for the measurement of temperature, hygrometry and air quality :

- **Air Quality probes (CO / temperature, CO<sub>2</sub> / temperature, CO<sub>2</sub> / temperature / hygrometry):**  
Audible alarm (2 setpoints), Selection of units, Hold function, minimum and maximum values
- **Thermocouple module:**
